

## Building a Healthy Future

The global leader in door opening solutions

As manufacturers, we have a responsibility to make sure schools are also considered a safe haven from contagions. Volatile Organic Compounds (VOCs) from paints and coatings, formaldehyde from wood products, and phthalates from adhesives are some of the types of air pollution that can be found in building materials.

ASSA ABLOY Wood Doors has taken the steps to ensure the doors we manufacture help keep the atmosphere for buildings free from chemicals that can harm developing young bodies. ASSA ABLOY Wood Doors have been tested and certified by the GREENGUARD Environmental Institute.

GREENGUARD is nationally recognized for helping improve indoor air quality in buildings. The GREENGUARD Certification requirements also comply with:

- State of California's Department of Public Health Services Standard Practice for Specification Section 01350 (California Section 01350) for testing chemical emissions from building products used in schools and other environments.
- CHPS Best Practices Manual for K-12 schools
- US Green Building Council's LEED® Green Building Rating Systems
- Green Guide for Healthcare
- NAHB Green Building Guidelines
- Green Globes
